Cyber Security for the Tertiary Sector

Awareness Campaign 2023

Why?

- Some organisations are vulnerable because basic safeguards are not in place and people don't know enough.
- The purpose of the awareness campaign:
 - To make the whole sector aware of common cyber attacks and risks.
 - To provide guidance on security measures and why they should be in place.
 - To help manage risk for the organisation, both on its premises and off-site.

Cyber attack on NZ's largest insurer of doctors MAS may have exposed members' personal data

Our desired outcome

To ensure TEOs are fully aware of this project and the issues it is trying to address.

The sector's level of cyber security maturity improves to the point that leaders, staff and learners have a better understanding of cyber threats and their impacts, and their own responsibilities in maintaining safer cyber environments.

A more cyber-secure tertiary education and training sector and a safer learning environment for learners and staff with fewer incidents and events.

Ngā mihi
